Why Choose Us?

- Our diverse logistics background means we know more than just customs. We know how to navigate your supply chain to find more savings.
- We're not your broker. We look at your drawback with a fresh, unbiased perspective.
- We know compliance. Our drawback filings will be accurate and properly researched.

We approach your organization with a plan that asks the right questions from the right people in your organization to guide our efforts to uncover cost savings from your supply chain.

You may be entitled to duty drawback refunds and not even know it. The refund may be for goods you purchased from other domestic suppliers, where the duties paid were built into the cost of goods you purchased. If those materials became components in your finished products that are ultimately exported, then you are still entitled to apply for the duty drawback.

Our duty drawback service provides your organization with a risk-free opportunity to assess your supply chain for duty optimization.

At the end of our research we'll review the options available for current drawback and potential opportunities to restructure your operations to take advantage of deferral/relief programs to keep costs down on an ongoing basis.

The process may even find other untapped opportunities within your supply chain for further cost savings.
